

SAYL™

Elevator speech

SAYL is a **family** of work and side chairs that deliver all of the **design, innovation and performance** you expect from Herman Miller at a price that is affordable.

Designed by **Yves Béhar**, featuring advanced ergonomic performance combined with environmental responsibility. The design delivers a higher standard than has been realised before in mid-priced seating.

Attainable now

- Natural extension of our belief that everyone deserves a good chair.
- Every single part of SAYL is reinvented and rethought creating a better, smarter and less expensive chair.

Elegant anywhere

- Complete seating line including 3 variations of work chair back style; upholstered mid-back, upholstered high-back and suspension back.
- Complimentary cantilever chair ideal for meeting / conference rooms comes in 3 back styles: moulded plastic, fully upholstered or suspension.
- 4-leg visitor chair with glides or castors stacks up to 4 high, also with 3 back-styles and a broad colour palette.
- Simple, elegant design slips in and out of any environment, complementing, rather than competing.

3D intelligent suspension™

- Unframed back has no hard edges, allowing the user greater freedom to move.
- Back is supported by the 'Y-Tower™' structure.
- Passive Posturefit™ moulded directly into the material delivering a perfect fit for a variety of body types.
- Tension is increased in areas that need more support, and lessened for softer areas.
- Great comfort, healthy movement and support.

Designed by Yves Behar – Fuse project.

- Yves Behar – founder of San Francisco based ‘Fuse project’ has a wealth of experience designing for global brands.
- Known for challenging convention and making great design attainable.
- Projects include: Leaf light for Herman Miller, XO Laptop for the ‘One laptop per child’ project, birkenstock birki clog and Jawbone mobile device.
- Human-centred approach to design is very much in-tune with Herman Miller’s seating philosophy.
- SAYL is inspired by San-francisco’s golden gate suspension bridge, suspension technology delivers high performance using minimal materials.

Colours, materials and finishes

- Task chair:
 - Black or white frame
 - Black, grey or polished base
 - 8 suspension finishes
 - 7 armpad colours
 - Over 100 fabric colours
